SECOND YEAR FPST CLASSES **1 h:30**
2025/2026

NAME : **GROUP :**

FIRST ENGLISH EXAM

Part One: Reading Comprehension (8 points)

Workplace Health and Safety

Health and safety is a major concern in engineering workplaces such as factories, laboratories, and construction sites. Engineers are responsible for identifying potential hazards and reducing risks that may cause accidents or injuries. Poor safety practices can lead to serious consequences, including injuries, loss of productivity, and even fatalities.

Employers must provide proper safety equipment and ensure that workers are trained to use machines correctly. For example, wearing protective helmets, gloves, and safety glasses can prevent many accidents. In addition, safety regulations must be respected at all times. If workers ignore safety rules, they may put themselves and others in danger.

Creating a strong safety culture requires cooperation between employers and employees. When safety measures are followed correctly, workplaces become safer and more efficient.

Text Reference: Original pedagogical text created for ESP assessment purposes, based on general workplace health and safety principles commonly used in engineering contexts.

Instructions: Answer all questions clearly. **(5pts)**

1. Why is health and safety important in engineering workplaces?

   .....

2. Mention **two** consequences of poor safety practices.

   .....

3. What responsibilities do employers have regarding safety?

   .....

4. Give **two** examples of safety equipment mentioned in the text.

   .....

5. Who should cooperate to create a strong safety culture?

.....

Part Two: Vocabulary and Grammar tasks

A/ Match the words with their meanings **(2pts)**

1. Hazard	a. Something that can cause harm
2. Injury	b. Rules that must be followed
3. Equipment	c. Physical harm to the body
4. Regulations	d. Tools or protective items

B/ Fill in the blanks using words **from the text. (2pts)**

1. Engineers must reduce workplace .....
2. Wearing protective ..... can prevent accidents.

C/ Complete these sentences with the correct form of the verbs in brackets.**(4pts)**

1. If workers follow safety rules, they .....(avoid) accidents.
2. If the company did not provide safety equipment, workers .....(be) at risk.
3. If engineers had ignored the hazards, serious accidents .....(occur).
4. As long as safety training ..... (improve), productivity will increase.

D/ Choose the correct modal verb (must – should – can – may-- shall) **(2pts)**

1. Engineers ..... identify risks in the workplace.
2. Workers ..... wear helmets to protect their heads.
3. Safety equipment ..... reduce the number of accidents.
4. Employees ..... be injured if safety rules are ignored.

Part Three: Written Expression (5pts)

Reorder the sentences to form a coherent paragraph:

A. As a result, accidents can be reduced and productivity can be improved.

B. Health and safety is a major concern in engineering environments such as laboratories and construction sites.

C. Therefore, engineers and workers must follow safety rules and use protective equipment.

D. Unsafe working conditions may lead to injuries, equipment damage, or even loss of life.

E. Identifying hazards is one of the main responsibilities of engineers.

.....

GOOD LUCK

Answer Key and Marking Scheme

Part One

1. Importance of preventing accidents **(1pt)**
2. Injuries, loss of productivity, fatalities **(1pt)**
3. Provide equipment and training **(1pt)**
4. Helmets, gloves, safety glasses **(1pt)**
5. Employers and employees **(1pt)**

Part Two

Matching: 1-a, 2-c, 3-d, 4-b **(2pts)**

Fill in: hazards / equipment **(2pts)**

Correct verbs in brackets : will avoid / would be / would have occurred / improves **(4pts)**

Model verbs : must / must / can / may — Rewrite: must **(2pts)**

Part Three:

Correct order: B – E – D – C – A **(5pts)**
